Summary	Detail-oriented computer science graduate with experience in deploying AI systems, including a RAG and vector-DB learning platform for over 500 students and a multimodal GenAI medical application. Demonstrated expertise in prompt engineering, LLM cost optimization, and multi-provider routing. Proficient in Python, AI and AWS		
Education	Aditya degree college Computer Science	Bachelor of Science • 8.3 GPA Gajuwaka, IN • 2023- 2026	
Experience	Freelancer (VibhillionAI) fullstack ai engineer	Remote March 2025 - December 2025	
	Engineered multi-provider routing across Gemini 2.5 Flash, GPT-40-mini to eliminate single-provider LLM lock-in, achieving a 35% reduction in inference failure rate through automatic fallback on API errors.		
	Shipped a production RAG system (LangChain + Qdrant) with dual embedding strategies - BGE Small via HuggingFace Transformers for on-device inference and text-embedding-3-small via OpenAI API-enabling semantic course search for 500+ active students.		
	Cut repeated-query latency by -40% for high-traffic sessions by combining WebSocket streaming with a Redis response-caching layer on the AI inference stack.		
	Achieved zero-downtime releases across all services by automating CI/CD for AI microservices to AWS ECS (vibhillon-cluster, ap-south-1) via GitHub Actions and Amazon ECR.		
	Developed new features enhancing user interaction on the platform, contributing to improved engagement and satisfaction.		
	Freelancer fullstack ai engineer	Remote November 2024 - March 2026	
	Delivered five production web applications end-to-end, achieving 100% on-time delivery and 4.8/5 client satisfaction rating.		
	Streamlined deployment processes for client projects, reducing time by 60% through GitHub Actions integrated with AWS.		
	Collaborated with clients to gather requirements and clarify project objectives.		
	Designed and implemented RESTful APIs for seamless data integration.		
	Developed responsive web applications utilizing JavaScript and React frameworks.		

Skills	RAG pipelines	Prompt Engineering	AI Model Optimization
	LLM Cost Optimization	Embeddings	LangChain
	Qdrant	HuggingFace	Transformers
	OpenAI API	Vector DB	AI Frameworks
	Python	JavaScript	AWS
	ECS	SQL	Redis
	CI/CD	Workflow Automation	Git
	Github actions	MCP	
Projects	VibhillionAI		2025-2025
	We set out to solve a massive problem for students preparing for high-stakes exams like UPSC, SSC, and Banking: the overwhelming amount of unstructured, sometimes unreliable information out there.		
	https://vibhillionai.com/		
	MedSimplify		2026-2026
Multimodal GenAI Medical Report Simplifier, FastAPI, React.js, GPT-4o, Goxins 1.5 Flash, Python, Built a multimodal GenAI pipeline-GPT-4o mini for OCR/document parsing, Gemini 15 Flash for multilingual simplification-converting medical reports to patient-friendly summaries in English, Hindi, and Telugu. Implemented a 3-key API rotation strategy and file-based response caching to eliminate rate-limit failures and reduce LLM API costs by -60% under free-tier constraints. Deployed backend to Railway, frontend to Vercel.			
Blometric Authentication System		2024-2024	
Python, Computer Vision, Image Processing, Cloud Storage, Iris recognition system using automated computer vision and image processing techniques. Integrated cloud storage and secure authentication workflows-applying AI beyond standard coursework into a working deployed product.			
Certifications	Google Cloud - Prompt Engineering for Generative AI		2025
	Google Cloud		
	Microsoft Azure Fundamentals (AZ-900)		2024
	Microsoft		
	Google Cloud Platform Fundamentals,		2024
